

Venus VPD-233 Audit Report

DISCLAIMER | HASHDIT

- The analysis of the Severity by **Hashdit** is purely based on the smart contracts mentioned in the Audit Scope and does not include any other potential contracts deployed by the Owner. No applications or operations were reviewed for Severity. No product code has been reviewed.

Audit Period: 2026/02/27 - 2026/03/02 (YYYY/MM/DD)

Project Name	Venus VPD-233 Audit Report
Github	https://github.com/VenusProtocol/venus-protocol/pull/646

Smart contracts list:

No.	Contract Name	Verdict	Details
1	contracts/Tokens/VTokens/VToken.sol	Green	

Findings

None.

This update modifies the repay logic in the VToken contract to explicitly cap the repayment amount at the borrower's current outstanding debt. Previously, the actual repayment amount could exceed the borrower's debt, potentially causing inconsistencies and requiring users to calculate exact debt amounts or use maximum values to avoid overpayment. With this change, the repayBorrow and repayBorrowBehalf functions now automatically limit repayments to the debt owed, allowing users to safely specify repayment amounts greater than the debt without risk of over-repayment. This also ensures that emitted events accurately reflect the true amount repaid. Additionally, the update prevents underflow errors in internal calculations by guaranteeing that subtraction operations do not result in negative values. Overall, this improves the reliability, safety, and user-friendliness of the repayment and liquidation processes.
